

TeleForm Connector for Microsoft SharePoint

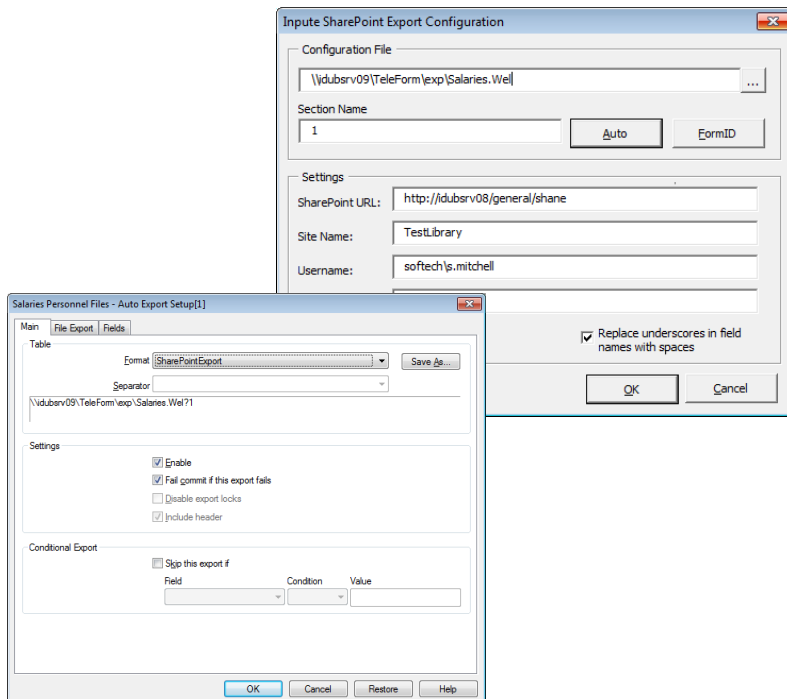

Inpute release a TeleForm Connector for Microsoft SharePoint. Developed by Inpute, this flexible module allows Teleform users to seamlessly export captured and validated metadata, plus associated images from Teleform to the Microsoft SharePoint Document Library.

By combing the power of Teleform and the SharePoint Connector, SharePoint users can now automate the capture, extraction and validation of machine print (OCR), handprint (ICR), bar codes and tick marks (OMR) from structured and unstructured documents such as order forms, application forms, supplier invoices and claim forms.

The end result - scanned and electronic documents are indexed and stored within Microsoft SharePoint, automatically.

Key Features

- Out of the box Teleform integration with SharePoint versions 2003 or higher, supporting Teleform 9.x and 10.x versions
- Export to standard SharePoint Document Libraries, including the creation of folders
- Populate document meta data into custom columns on the SharePoint Library
- Utilise SharePoint's powerful search capabilities to locate documents quickly
- Standard export setup dialogue allows mapping of form fields to SharePoint columns

System Requirements

- Microsoft SharePoint 2003 or higher
- Teleform 9.x or Teleform 10.x
